

# Leonardo Alvarenga

Belo Horizonte, MG – Brazil

Hi there!

I am writing to express my interest in the Fullstack Engineer position at Plank. With 4 years of hands-on experience delivering robust, scalable, and performance-driven web applications, I am confident in my ability to contribute meaningfully to your development team and help build impactful digital solutions.

In my current role as a Software Engineer at Vetta, I have worked on Viridis NG, a suite of web applications focused on sustainability and energy optimization for the steel industry. I've contributed across the stack: from building responsive front-end interfaces with React and TypeScript, to creating and documenting REST APIs using Node.js and Express, and working directly with PostgreSQL for data modeling and performance tuning. This experience has deepened my understanding of full-cycle development, code quality, and team collaboration.

Throughout my years as a Developer, I've also delivered custom web solutions tailored to diverse client needs, taking full ownership of both front-end and back-end. These projects sharpened my adaptability, expanded my technical stack (including FastAPI, NestJS, and SvelteKit), and strengthened my problem-solving skills.

What excites me the most about Plank is the opportunity to contribute to a team that values continuous learning. I bring not only a solid technical foundation but also a proactive mindset, strong communication skills, and a passion for shipping high-quality features that users love.

I would love the chance to be able to contribute with my experience and enthusiasm. Thank you for considering my application.

Regards,  
Leonardo A. Alvarenga
